THE KROS: THE FIRST AND MOST USED MOBILE URINAL IN THE WORLD

The Kros is a urinal made of synthetics (polyethylene) with an integrated tank of maximally 480 litres (more than 1500 urination turns). The unit only weighs 85 kilos and can be easily handled, thanks to its low weight and its advanced design.

Every Kros allows 4 men simultaneously to “spend a penny” within less than 1.5 m², yet there is enough privacy, thanks to the standing dividing walls.

The Kros can be placed anywhere where there is need for an effective urinal. The Kros is commonly used as a mobile urinal. After all, the Kros can be easily emptied using a service truck, which practically every toilet rental company has. However, the Kros can also be used as a semi-permanent urinal, thanks to its built-in option to connect it to a sewer system. Optional smell extraction valves ensure that the Kros can be of service as long as needed, without any unpleasant smells.

PROVEN CONCEPT

Across the world, the Kros is already a proven concept. Therefore, many municipalities have made the Kros compulsory at outdoor events. But the Kros is also often used in city centres, in order to prevent people from urinating in public, or at indoor events where the toilet capacity is insufficient.

By origin, the Kros is a Dutch product. Every toilet rental company in the Netherlands has a number of them in its rental programme. On the celebration of the Queen’s birthday in Amsterdam, each year on 30 April, you simply cannot miss the Kros. More than 750 of them are spread across the city centre on that day!

RANGE OF APPLICATION

The Kros can be used as an independent product but it is also the perfect supplement to toilets of any kind. Queues at the toilets will be shorter, the load on the toilets will be less and the toilets stay cleaner, particularly for the ladies, etc...

The Kros saves a lot of time and money as regards emptying and cleaning. A regular toilet cabin can be used 250 times at most and a Kros no less than 1500 times! There is the advantage of 5 services with the additional advantage that the toilet cabins stay cleaner.

HISTORY

The Kros was developed by Joost Carlier at the beginning of the nineties. Meanwhile, the Kros is the best and most used urinal worldwide during outdoor events and the urinal has been awarded the “iF Seal for Good Industrial Design”, an important internationally accredited German award in the field of industrial design. Over the years, the Kros has been further enhanced and since 2011 there are 3 models on the market.

KROS 1 (production and sales from Brazil)

KROS 2 (production and sales from the Netherlands and South Africa)

KROS 3 (production and sales from the Netherlands).

CONSULTANCY

For further information, we would like to refer you to our website, but we are always willing to provide advice regarding the Kros by phone and by email. Of course, a meeting on site is also an option.

DURABILITY

The Kros is not only practically and beautifully designed, it also provides an active contribution to a cleaner environment and a better and more enjoyable world.

The Kros is made from polyethylene, a durable and fully recyclable material and is deliberately constructed with little weight in order to save fuel. A Kros uses considerably less water than a conventional urinal; flushing with a minimum 6 litres of water is not needed.

Urinating in public is a major problem which results in many complaints. The smell is particularly irritating, but urine also affects the environment. Urine has already caused damages worth billions of Euros globally. The saying, “if one sheep leaps over the ditch, all the rest will follow,” hits the nail right on the head when it involves urinating in public. Urine smell is regarded as an “invitation” for others to urinate in public. Many campaigns are organised to fight urinating in public, but that is only possible when there are real alternatives...

THE ADVANTAGES

- Cost-saving and profit-increasing
- Can be placed anywhere; can be used as a mobile and as a semi-permanent urinal
- Bigger capacity (1500 turns)
- Space-saving: 4 urinals in 1
- Easy to move
- Easy to place without lift truck using a trolley
- Easy to empty and to clean
- Neutral design: fits every street scene (can be supplied in every RAL colour)
- Long life
- The perfect solution to prevent urinating in public
- A perfect tool for collecting pure urine separately

KROS

MOBILE URINAL UNIT

THE KROS CAN BE USED AT:

Pop concerts, festivals, sports events, open days, festivities and parties, places of entertainment, parades, fairs, camping sites, markets, petrol stations, picnic areas, parks, shopping centres, city centres, marinas, slum areas, Olympic Games, World Cups, Grand Prix, mining sites, carnivals, rodeos, October fests, military exercises, etc...

COLOURS AND ACCESSORIES

The Kros can be standard supplied in these colours:

- Grey (granite) • blue (RAL5010) • red (RAL3020) • green (RAL6024) • yellow (RAL1003).

Other colours are possible from 25 units (your company colour, for example); please ask for the possibilities!

Various accessories are available for the Kros. Please view our website for the options.

TECHNICAL SPECIFICATIONS

KROS 2

Dimensions: 1.08 x 1.08
x 2.02 m / Weight: 83 kg
/ Volume: 400 litres

- 1 Can be lifted by 4 stainless steel hoisting points / hand grips
- 2 Passage (10 cm) for suction tube
- 3 The Kros is made of 6 mm thick polyethylene and has a 400-litre content.
- 4 Integrated pallet floor (108 x 108 cm) with raised slots for lifting truck / pallet truck
- 5 Deepest point for optimal suction
- 6 1 1/4" integrated inside-threaded connection point for sewer drainage
- 7 Lockable anchoring point on each corner
- 8 Optional smell extraction valve
- 9 1 higher step for small people
- 10 4 stainless steel hand grips for easy handling

KROS 3

Dimensions 1.18
x 1.18 x 2.22 m
/ Weight: 85 kg /
Volume: 480 litres

- 1 Can be lifted (empty) by hoisting eye
- 2 Passage (10 cm) for suction tube
- 3 The Kros is made of 6 mm thick polyethylene and has a 480-litre content.
- 4 Reinforced separate pallet floor (115 x 115 cm) with raised slots for lifting truck / pallet truck
- 5 Deepest point for optimal suction
- 6 1 1/4" integrated inside-threaded connection point for sewer drainage
- 7 Optional smell valve
- 8 1 higher step for small people
- 9 1 integrated hand grip for easy handling
